

## ISI's SQLRx<sup>®</sup> Practice Adds Index Diagnosis Offering

**Dallas, TX – May 26, 2011** – Integrated Services, Inc., announces the addition of a new SQL Index Diagnosis service to its list of offerings. Indexes are essential to all databases for optimal query performance. However, most index tuning is a laborious trial-and-error process. SQLRx now offers an index diagnosis service which quickly delivers a report highlighting which database tables are burdened with unused or unnecessary indexes, how much additional overhead is being performed to maintain unused indexes, and how many missing indexes are reported by SQL Server.

ISI's **SQLRx** is the culmination of proven industry “best practices” and ISI's years of experience optimizing database and system architecture and performance. SQLRx uniquely collects and correlates both SQL Server and system performance data to quickly identify and decode performance bottlenecks. In addition to solving performance issues, SQLRx also encompasses disaster recovery, data migration, and RemoteDBA<sup>®</sup> monitoring.

### **About Integrated Services, Inc.**

ISI has been a recognized leader in delivering IT strategy and architecture solutions since 1985. As Microsoft's 2008 Worldwide Partner of the Year for Data Management and 2007 finalist for Business Intelligence, ISI leverages Microsoft platforms to deliver powerful and cost-effective self-service solutions.
