

Integrated Services, Inc. Announces SQL Rx[®] WinPerf[™] 3.1 Improve SQL Performance and Avoid Unnecessary Hardware

Dallas, TX — April 15, 2008 — Integrated Services, Inc. (ISI) today announced its latest version of WinPerf[™] 3.1 from its SQLRx[®] division (www.sqlrx.com). WinPerf is a SQL Server Performance and Capacity Tuning tool developed by ISI to collect and uniquely correlate both SQL Server and System performance data to quickly identify and decode bottlenecks.

Through its SQLRx practice, ISI has delivered its WinPerf service to several hundred companies per year since its first release in 2005. WinPerf delivers a formalized report, not only isolating performance and capacity constraints, but identifying root cause and decoding even to a specific line of code. WinPerf is widely used by companies such as Unisys, Microsoft and EMC, as well as numerous mid and large size enterprises.

Available as both a Full and Lite Assessment, WinPerf is a cost effective and quick solution to resolve performance and capacity constraints. For pricing or more information, contact Lori Brown at 214-526-7680 x113 or email lorib@isi85.com
